## frequently asked questions

### can anyone drink cannabis infused beverages?

We can't promote or claim that our products are safe for everyone or anyone. First and foremost, you must be 21+ to purchase cannabis in any form. THC Socials are ideal for people looking for a hangover free adult beverage! They are great in social situations when you simply want to have an enjoyable time without having to feel the peer pressure of having an alcoholic beverage. Each can is infused with a low-ish dose of Delta 9 THC so you can choose your vibe.

### what are the benefits of drinking the infused beverages?

The initial and continued explorations indicate that Delta 9 THC can be utilized to help with sleep quality, physical uneasiness, balance, and general disposition. Like CBD, THC collaborates with your endocannabinoid system, or ECS, which is known for controlling your body's natural balance or homeostasis. That is why THC, as with CBD, may have an impact on a wide range of things like sleep, disposition, and hunger, since those capacities all add to your body's regular homeostatic balance.

### are there side effects?

THC Social's are unlikely to cause negative side effects. However, like everything out there, there are a few side effects that can occur. If you have any concerns, you should consult your doctor.

### are cannabis infused drinks legal?

In 2018 Congress with the support of President Trump passed the 2018 Farm Bill, the first ever cannabis legislation, which removed hemp as a federally controlled substance. It also says that any hemp and hemp-derived products that contain less than 0.3% Delta-9 THC by dry weight are considered federally legal in the United States. By this definition, all our Delta 9 THC products are federally compliant under the standards set by the 2018 Farm Bill.

### what is the difference between delta-9 thc and the sold in dispensaries?

THC is a generic term used to describe the psychoactive compound in cannabis, Delta-9 THC is the naturally occurring compound in the cannabis plant and the Hemp plant. Our ingredients say 'Hemp Extract' because our THC is extracted from the hemp plant not the cannabis plant, but once extracted THC is THC. We just need to be under 0.3% total delta 9 THC limit, and derived from the hemp plant, to be compliant... and we are!

### what is the dosage?

THC Social's are a delicious 5mg low-ish dose lightly carbonated THC-infused seltzer. Designed to be a hangover free adult beverage option with only 80 calories. Vibes: Delightful, smooth, social. Each can contains 5 MG Delta- 9 THC. We use a fast acting, water soluble THC from hemp extract and effects can be felt in 15- 20 minutes. Be mindful when enjoying.

### does the social taste like weed?

THC Social drinks seamlessly with zero cannabis taste, completely unnoticeable, tastes like the flavor you chose.

### the drinks vs gummy's; how do they compare?

Normal THC edibles take much longer to make it to your brain. The THC in a typical gummy has to make its way all the way through your liver for your body to push it into the blood stream. Drinks provide a faster onset, usually setting in between 10 and 15 mins. 5mg is a low dose for most with a THC beverage, so some people enjoy a couple.

### how many the socials do i need to get high?

Honestly, we don't know. How many drinks do you need to get drunk? Many say 1 THC social is similar to a glass of wine or a beer. The THC experience is different for everyone, just like booze. THC Social is nice and chill, with only 5mg you can find what works for you. Drink one, two, three... whatever makes you feel good. We feel good that you won't have that boozy hangover the next day!

### how many calories are in a the social?

80 calories per can. A high noon or white claw has 100 calories, and a Miller light has 96, so you can stay lite when enjoying a Social! We use natural flavors, real juice concentrates, real cane sugar.... Nothing fake here!

### do you need to refrigerate the social?

You do NOT need to refrigerate THC Social's until you open it. Buuut we highly recommend chilling for the best sipping experience, if that's throwing them in the fridge or over ice.

### what is the qr code for on you can?

Customers that question if there really is THC in the can, or say, "the ingredients say hemp extract, this is fake THC, I don't want Hemp", or they ask if there is any COA (certificate of analysis) to show what amounts of THC or CBD are in the product... they can scan that code with their phone, and it will take them right to a testing page that shows cannabis results from a third party testing lab. Those tests will show you exactly how much THC is in each can. Scan QR Code on can.
